

# UNITE THE PEOPLE

## DIGITAL WIRELESS COMMUNICATION SYSTEM

**Unite is a digital wireless communication system that allows people to communicate and interact with each other in a wide range of applications such as guided tours, wireless presentations, assistive listening, blind coverage, education, interpretation and language distribution.**

This digital platform opens up to new possibilities for improved dialogue between people, regardless of when, where and how they wish to communicate. Unite connects people - even over larger distances, language barriers or with sensory disabilities.

The future-proof, wireless transmission platform in DECT standard means the system can be used without certification and licence fees. You don't need to worry about frequencies - that are region-dependent - as the system itself automatically controls robust and encrypted transmission. This allows up to 32 groups to be integrated in parallel, and its wide operating range and long operating time offer completely stable transmission conditions.

### Unite applications:

- Guided tours
- Education
- Wireless presenting
- Language distribution
- Inclusivity

### MULTI-WAY-COMMUNICATION – DIALOGUE INSTEAD OF MONOLOGUE –

Unite transmits audio signals bi-directionally. The receivers' talkback function makes group dialogue possible, allowing for interactive tours and events. Other guides or speakers can also actively be brought in. Unite allows up to three people to speak simultaneously, with any number of listeners. The guide with the main device can decide whether word contributions from his group are audible for him only, or for all participants. For the purpose of maintaining order among the questioners, you can also specify whether they are activated or not. If you want to integrate external devices bi-directionally, you can do so via existing digital, analogue and wireless audio interfaces.

## FOCUS on guided tours

You can use Unite as a tour guide system for factory tours, museum tours or tourism facilities, allowing questions from the audience and integration of a second guide. Unite enables you to have a dialogue with your visitors. You can decide yourself whether you only can hear the questions, or the whole group for example. You can also send audio tracks and integrate a second guide without problem.

## FOCUS on language distribution

You can use Unite as an interpreting system and a language distribution solution so the audience can tune into the conversation in their language of choice. There is a total of eight access points that can be synchronized for up to 32 channels for wide coverage. Easy to use and highly efficient, Unite is the ideal system for international meetings with interpreters, in small or large rooms.

### Features:

Fee-free DECT standard with no registration required

3 people can speak simultaneously

Versatile use for the widest range of applications

Can be used for assistive listening
